

KOLONIERNA

News from the periphery.

Here are some short news from the colonies. There are several crazy clearcuts in progress around the country, that people are fighting against. On the other hand it's not going good for the mining industry due to low iron ore prices.

Jamtmyråforest

SCA wants to clearcut Lost-forest (Vilseskogen). SCA has been driving into the forest, which is a part of the Jamtmyråforest, and cut road paths to prepare for clearcutting. But the resistance is strong in the Gässjö village.

Blood trails in The Vilseskogen

"Help me save Vilseskogen. Not just it, but all vilse-forests. Stop everything dis-harmonizing the rhythm of the wild. Help me confront power on all fronts, rise up as participants of the cosmic family. SCA (Satanic Clearcutting Agency) does not belong on this planet! They are demonic techno-parasites on my extended soul body. Enlarge your soul. Visit the old oak, visit the stream that flows nearby, visit your child, your wildness, your mother. Walk into the forest and feel it's vibrations. It is always receptive, kind, ever giving. Let the ancient motherly love be the spark that light the flame of hope. Then burn down the tyrant, set fire to power structures, blow up all borders, all walls, all mental blockades. Happiness, without struggle against the existing system, is the myth that feeds the continuation of the machine. Awaken your life to the song of sadness, your inner shaman! Life never gets more beautiful than your breaths, fill 'em with music and beauty. Crush the existing system! Time doesn't exist for waiting."

JOKKMOKK

"The united people of Jokkmokk won a victory against the military! There will not be an extended area for testing! On the Vidsel base they decided to do other things this spring. We relax for now and roll our thumbs 'til next time."

One person taken down from a tree in Gállok during the protests 2013 was freed in the court because the area was not officially closed off.

Sorsele

"Sveaskog is going to winter clear-cut 600 ha nature-forest, important for people and with low wood money value. It's on Sorseles outdoor recreations area, hunting grounds and with kilometer-wide clearcuts all other interests that Sveaskogs will be ruined.

Rans saami-village is worried for the harsh decrease of lichen, important food for the reindeer.

Interesting is that the forest authorities are very critical and wants the clear cut stopped but are powerless in this situation. It would be awesome to reach the public about our authorities' inability in its own field. Also good points if an action is taking place!"

Norra Kärr

In Norra Kärr, Tasman Metals has sent a surprising banal newsletter to calm down the people. They say there is nothing to worry about the water, and they made a nice drawing how the process works almost like the circle of life, but without the waste dams at all!

They changed test-mining for new test drillings with thick diameters. This is to continue mapping the rare earths that we will not let them take. They also deleted all info about uranium from their website, maybe because the local municipalities then would have the right to stop the mine if they knew. Foul play to first write there are low amounts of uranium (10-15 ppm) and then change.

Pajala

Northlands mine has today reached bankruptcy! It was expected and this means the situation is not very good for another new mine in Jokkmokk (Gállok, Kallak).
